COROPUR Top Coat

#### Moisture-curing PU coatings – ideal in difficult conditions

Whether it is in a shipyard, on a bridge in a harsh climate, or in cool, damp caves: moisture-curing PU coatings can be relied on to satisfy the most demanding requirements even in challenging conditions, as regards application, curing and also durability of the dry film. Eclatin is market-leader in the development and manufacture of such MC systems. You can ask us!

The 70 m long steamship "La Suisse", built in 1910, was completely renovated in 2007-2009 and taken back into service on 16th May 2009.

The conditions prevailing in the dockyard – high air humidity and low temperatures in winter-time – call for appropriate coating materials, and those which also meet the high standards needed when operating a ship. Today MC products by Eclatin are found in use for the paintwork on ships on every Swiss lake!
