Sector: **Steel Construction**

Liverpool Footbridge

Built in: 2008

Products used: ECLON EP Zinc Dust Primer
ECLON EP Iron Mica
ECLON PUR Top Coat

Matching Solutions – also for special requirements

A durable anti-corrosion protection is not always the only criterion to be met. Long transport distances via road and sea, high loads during assembly, the need for subsequent welding works etc. all can decisively influence the choice of system. Thanks to our wide range and our wealth of experience we are the right contact persons! And we enjoy being at your service....

Photos: Tuschmid/Tim Soar; London

The gangway spans 60 metres at a height of 8 metres. Its angular form is due to the two exit points not being aligned together. It consists of three parts, the faceted-surfaces design results from the diagonal twisting of load-bearing flat steel panels, which are welded to a stiff structure, and glazed lightweight construction components. Made in Switzerland, it was shipped to Liverpool in three parts, where it was assembled in a single night using a clever assembly plan.
